

Hi everyone ,

I have been using “Instructions to make a snake game” file to make the snake game . So snake has been set up but moving and eating is still left (which will need cooperation of others) . I tried several times moving it but it crashes again and again .

I have found another small project someone made related to Snake game . Though it does not run in our emulator , it runs in other emulator (for example Kiwi 8 emulator (zip file) which I have attached in my folder . It is a good project to get just an idea I guess).

SnakeRomfornow is the ROM File for the present moment.

Thank you everyone ! You all are awesome !!

Nishan
